StudentHub Portal

1. Problem Definition

Students need a single web portal to access academic and campus-related information.

Currently, information about events, registrations, notices, student profiles, and feedback may be available through different systems.

StudentHub will provide one centralized web portal for students and administrators.

2. Project Objectives

1. Provide a single portal for students.
2. Allow students to register and log in.
3. Display college events and notices.
4. Allow students to register for events.
5. Allow students to manage their profiles.
6. Provide an administrative management system.

3. User Roles

3.1 Student

The student can:

- Register
- Login and logout
- View the student dashboard
- View and search events
- Register for events
- View and update profile
- View FAQ
- Submit feedback

3.2 Admin

The administrator can:

- Login
- View the admin dashboard
- Manage student records
- Add, update, and delete events
- View event registrations
- View system activities

4. Functional Requirements

FR-01: The system shall allow a new student to register.

FR-02: The system shall allow registered users to log in and log out.

FR-03: The student shall be able to view a personal dashboard.

FR-04: The student shall be able to view and search events.

FR-05: The student shall be able to register for an event.

FR-06: The student shall be able to view and update profile details.

FR-07: The system shall provide About, Contact, FAQ, and Feedback pages.

FR-08: The administrator shall be able to manage student records.

FR-09: The administrator shall be able to add, update, and delete events.

FR-10: The system shall restrict admin pages to administrator users only.

5. Non-Functional Requirements

NFR-01: The website should be easy to use and navigate.

NFR-02: The website should work properly on mobile, tablet, and desktop devices.

NFR-03: The website should follow basic accessibility guidelines.

NFR-04: User passwords should be stored securely.

NFR-05: The project should use an organized and maintainable folder structure.

NFR-06: The source code should be maintained using Git and GitHub.

6. Proposed Pages

1. Home
2. About
3. Register
4. Login
5. Student Dashboard
6. Events
7. Profile
8. Contact
9. FAQ
10. Feedback
11. Admin Dashboard
12. Manage Students
13. Manage Events

1. User Registration

- The system shall allow new students to create an account.
 - The system shall validate required fields.
 - The system shall prevent duplicate registrations.
-

2. User Login

- The system shall allow registered users to log in using email/username and password.
 - The system shall display an error message for invalid credentials.
-

3. Dashboard

- The system shall display a personalized dashboard after login.
 - The dashboard shall provide quick access to all modules.
-

4. Profile Management

- The system shall allow users to view their profile.
 - The system shall allow users to edit their profile information.
 - The system shall allow users to upload a profile picture (future enhancement).
-

5. Notice Board

- The system shall display all notices.
 - The system shall allow administrators to add, edit, and delete notices.
 - Students shall be able to view notices.
-

6. Study Materials

- The system shall allow administrators to upload study materials.
 - Students shall be able to view and download materials.
-

7. Events Module

- The system shall display upcoming events.
 - The system shall allow administrators to add or update events.
-

8. Timetable

- The system shall display the class timetable.
 - Administrators shall be able to update the timetable.
-

9. Contact Page

- The system shall provide contact details.
 - Users shall be able to submit queries using a contact form.
-

10. Navigation

- The system shall provide a navigation menu on every page.
 - Users shall be able to move between pages easily.
-

11. Logout

- The system shall allow users to log out securely.

Key Questions / Analysis/ Interpretation

1. What is URL and parts of URL?

➔ A **URL (Uniform Resource Locator)** is the address used to locate and access a resource (such as a webpage) on the Internet.

2. How does HTML file processed in web browser?

➔ **Steps**

➔ The user enters a URL into the browser.

➔ The browser sends a request to the web server.

➔ The server returns the HTML file.

➔ The browser reads the HTML and builds the **DOM (Document Object Model)**.

➔ The browser loads and applies CSS for styling.

➔ The browser executes JavaScript for interactivity.

➔ The webpage is rendered and displayed to the user.

3. How will page navigation flow managed among all HTML pages?

4. How will GitHub commits be maintained after each practical?

➔ Commit after completing each practical.

Write clear and descriptive commit messages.

Push changes to GitHub regularly.

Avoid uploading all changes in a single commit.
